FOREWORD

This Indian Standard (Part 1) (First Revision) was adopted by the Bureau of Indian Standards, after the draft finalized by the Thread Cutting Taps and Dies Sectional Committee had been approved by the Production Engineering Division Council.

This standard was first published as IS 6173 in 1971. In this revision it has been thoroughly revised and made into two parts, first part covering requirements of ISO Metric Screw Threads and second part covering requirements of Pipe Threads.

The major changes are as given below:

- a) This standard supersedes IS 9169 : 1979 'Dimensions for thread cutting elements for hand taps and machine taps — Serial', the contents of it has been covered in Annex A, so that correlation becomes easier.
- b) The standard has been extended to cover tolerances and dimensions of thread profiles of serial screwing taps of all classes with coarse pitch threads sizes from M1 to M68 and with fine pitch from M1 to M100 with all the possible diameter pitch combination of IS 4218 (Part 2) : 1976 'ISO metric screw threads: Part 2 Diameter pitch combinations (*first revision*)'. The repetition of limits and tolerance for screwing taps in product standards have been deleted.
- c) The tolerance for half Flank angle and Pitch error has been changed and adopted the values from ISO 2857 : 1973.

Considerable assistance has been derived from ISO 2857 : 1973 'Ground thread taps for ISO metric threads of tolerances 4H to 8H and 4G to 6G coarse and fine pitches — Manufacturing tolerance on threaded portion', issued by the International Organization for Standardization (ISO).

This edition 2.1 incorporates Amendment No. 1 (January 1996). Side bar indicates modification of the text as the result of incorporation of the amendment.

For the purpose of deciding whether a particular requirement of this standard is complied with, the final value, observed or calculated, expressing the result of a test, shall be rounded off in accordance with IS 2 : 1960 'Rules for rounding off numerical values (*revised*)'. The number of significant places retained in the rounded off value should be the same as that of the specified value in this standard.

SCREWING TAPS — DIMENSIONS AND TOLERANCES ON THREADED PORTION

PART 1 FOR ISO METRIC SCREW THREADS

(First Revision)

1 SCOPE

This standard covers dimensions and tolerances on threaded portion of screwing taps for ISO metric screw threads with coarse and fine pitches for serial and non-serial screwing taps with 4H, 6H, 7H ground threads and 7H cut thread classes.

3 BASIC DATA

3.1 Thread Profile of Nuts

Thread profile of threaded hole with zero minimum clearance on the pitch diameter (that is, with tolerance position H).

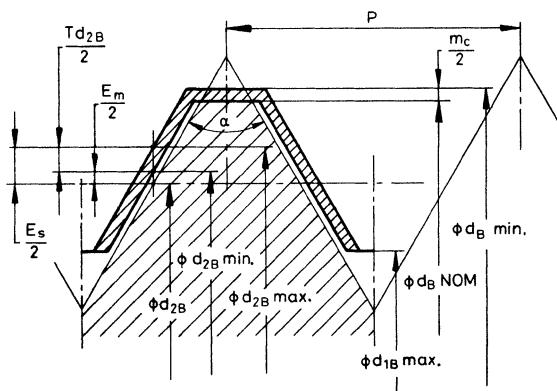

D = basic major diameter or nominal diameter
 D_1 = basic minor diameter
 D_2 = basic pitch diameter
 P = pitch of the thread

H = height of the fundamental triangle
 α = flank angle of the thread
 TD_1 = minor diameter tolerance
 TD_2 = pitch diameter tolerance

3.2 Thread Profile of Screwing Taps

Thread profile of screwing taps for tapping threaded hole with zero minimum clearance on the pitch diameter (that is, with tolerance position H).

d_{NOM} = nominal major diameter
 d_{Min} = minimum major diameter
 a_{2B} = basic pitch diameter
 $d_{2B\text{Min}}$ = minimum pitch diameter
 $d_{2B\text{Max}}$ = maximum pitch diameter
 $d_{1B\text{Max}}$ = maximum minor diameter
 p = pitch of the thread
 m_c = minimum clearance (allowance for wear on major diameter)
 E_s = upper deviation of pitch diameter
 E_m = lower deviation of pitch diameter
 Td_{2B} = tolerance on pitch diameter

4 TOLERANCE CLASSES OF SCREWING TAPS

4.1 Ground Thread Screwing Taps

Three classes of screwing tap tolerances, that is, 4H, 6H and 7H shall be used for the various classes of nut threads as given below:

Class 4H is valid for tapping nut threads: 4H and 5H

Class 6H is valid for tapping nut threads: 6H and also 4G and 5G, and

Class 7H is valid for tapping nut threads: 7H, 8H and also 6G.

4.2 Cut Thread Screwing Taps

One class of tap tolerance, that is, 7H shall be used for the production of the class of tapping 7H and 8H.

IS 6173 (Part 1) : 1992

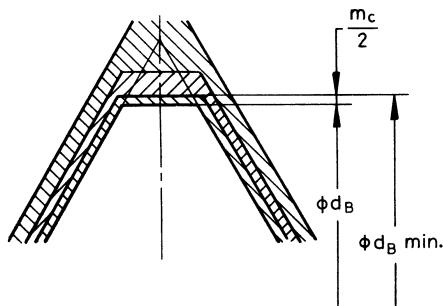

4.3 Since the accuracy of the tapping depends on the material to be tapped, the tapping attachment, the cutting speed, the lubricant, the condition of the machine tool, etc, the users are recommended to select the class of tap consistent with the class of nut thread required. Screwing taps in general shall produce tapped threads to the tolerances specified above.

4.4 In case of non-serial screwing taps the thread profile dimensions are same as that of finisher screwing tap thread dimensions, except for front chamfer (see **6.6** of IS 6171 : 1992 for details of chamfer angle and length).

5 SCREWING TAP THREAD ELEMENTS

5.1 Major Diameter d_B

To compensate for the wear on tap, the minimum major diameter $d_B \text{ Min}$ is equal to the nominal diameter D of Nut thread plus deviation m_c . The maximum diameter of d_B has not been specified and is left to the discretion of the manufacturer.

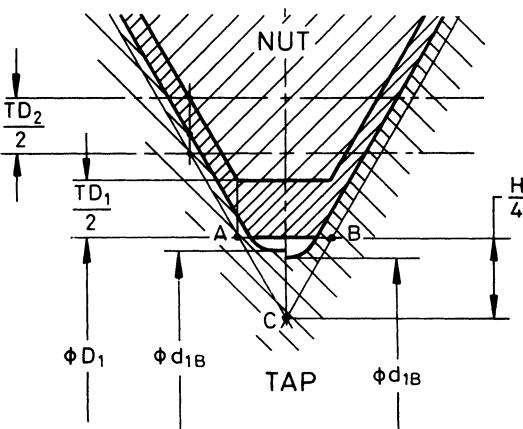

5.2 Pitch Diameter d_{2B}

The figure given below shows the comparison between position of tolerance zones for nut thread and screwing tap threads.

5.3 Minor Diameter d_{1B}

No tolerance has provided on this diameter. However, the root of thread shall lie within triangle ABC and the profile of the roots shall blend with the flanks.

5.4 The formulae for calculating thread profile dimensions for different classes of Rougher, Intermediate and Finisher screwing taps of Serial taps are covered in Table 1.

5.5 The formulae for calculating the thread profile dimensions for Rougher, Intermediate and Finisher screwing taps of serial screwing taps are given in Table 2.

6.2 Tolerances on Half Flank Angle $\alpha/2$

In order to exercise control on the symmetry of the thread as well as the total angle of the thread, the tolerances given in Table 3 for angles are to be regarded as the maximum permissible sum of the errors in the two half flank angles of the screwing tap thread, disregarding their signs.

6.3 Tolerances on Pitch

The limits of tolerance on the pitch shall be as shown in Table 4, which also shows length over which the measurement shall be made, expressed in number of pitches.

6.4 The tolerances on the other elements of the screwing tap shall be according to IS 6171 : 1992.

Standard Mark

The use of the Standard Mark is governed by the provisions of the *Bureau of Indian Standards Act, 1986* and the Rules and Regulations made thereunder. The Standard Mark on products covered by an Indian Standard conveys the assurance that they have been produced to comply with the requirements of that standard under a well defined system of inspection, testing and quality control which is devised and supervised by BIS and operated by the producer. Standard marked products are also continuously checked by BIS for conformity to that standard as a further safeguard. Details of conditions under which a licence for the use of the Standard Mark may be granted to manufacturers or producers may be obtained from the Bureau of Indian Standards.

Bureau of Indian Standards

BIS is a statutory institution established under the *Bureau of Indian Standards Act, 1986* to promote harmonious development of the activities of standardization, marking and quality certification of goods and attending to connected matters in the country.

Copyright

BIS has the copyright of all its publications. No part of these publications may be reproduced in any form without the prior permission in writing of BIS. This does not preclude the free use, in the course of implementing the standard, of necessary details, such as symbols and sizes, type or grade designations. Enquiries relating to copyright be addressed to the Director (Publications), BIS.

Review of Indian Standards

Amendments are issued to standards as the need arises on the basis of comments. Standards are also reviewed periodically; a standard along with amendments is reaffirmed when such review indicates that no changes are needed; if the review indicates that changes are needed, it is taken up for revision. Users of Indian Standards should ascertain that they are in possession of the latest amendments or edition by referring to the latest issue of 'BIS Catalogue' and 'Standards : Monthly Additions'.

This Indian Standard has been developed from Doc : No. PE 13 (5518)
